SUMMARY

M. RIZKY AGANDI. Influence of Black Soldier Fly (*Hermetia illucens* L.) Frass on the Growth of Pak Choy (*Brassica chinensis* L.) at Indonesia Institute of Sciences Experimental Station, Cibinong, Bogor. (Supervised by ARINAFRIL)

Black Soldier Fly (BSF) belongs to Order Diptera and has important role on human due to its role in bioconversion of organic waste which may be later used as frass compost. Compost is known as good fertilizer to grow horticultural plants

This field work was aimed to determine the influence of BSF maggot on the growth of Pak Choy (*Brassica chinensis* L.). Study was carried out by applying 7 treatments of compost and 5 controls, i.e. no treatment or control, compost, NPK Fertilizer, frass 5 %, frass 10 %, frass 15 %, and Bio-organic Fertilizer + Compost.

Field work which has been carried out at Laboratory of Microbiology and Greenhouse of Center for Biological Research, Indonesian Institute of Science, Cibinong, Bogor, from January to March 2020. Study was done by direct observation or scan sampling.

Study showed that frass significantly influenced the growth of pak choy compared to control.

Keywords: Black Soldier Fly; Frass; Pak Choy
