

Module designation	Food and Nutrition
Semester(s) in which	1 st semester/1 st year
the module is taught	
Person responsible	1. Ir. Nura Malahayati, M.Sc., Ph.D.
for the module	2. Dr. Merynda Indriyani Syafutri, STP., M.Si.
	3. Friska Syaiful, STP., M.Si.
Language	Indonesian
Relation to	Compulsory Course
curriculum	
Teaching methods	Face-to-face lecture (offline) and E-Learning (online)
Workload (incl.	5 hours and 40 minutes of total workload: 100 minutes for contact
contact hours, self-	study,120 minutes for structured academic assignment, and 120
study hours)	minutes for
	self-study per week
Credit points	2 credits (equivalent with 3.2 ECTS)
Required and recom-	-
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. understand the relationship between agriculture and food supply, and
learning outcomes	itsimpact on improving the quality of human resources.
	2. understand basic concepts including food and nutrition in the era of
	globalization, food and nutrition system, food consumption patterns.
	nutritional status, food security, food and nutrition regulations and
	policies.
	3. identify food and nutrition issues and their consequences, especially
	onhealth and population.
	4. evaluate an action plan to overcome malnutrition in Indonesia
Content	1. The relationship between agriculture, food and nutrition
	2. Food and nutrition as indicator human development
	3. Globalization and food security, globalization and food
	safety, globalization, lifestyle and nutritional status
	4. Food and nutrition systems and classification of food and nutrition
	5. Nutritional needs and food consumption patterns
	6. Nutritional status assessment
	7. Food safety and post-harvest handling
	8. Food security and food diversification
	9. Integrated Nutrition and Program in Food and Nutrition, MDGs
	andSDGs
	10. Food and nutrition problems (malnutrition) and the
	relationshipbetween food, nutrition and population
Examination forms	1. Multiple choice exams
	2. Essay exams
	2. Loon, Maino

Reading List	1. P.B. Ali. 2021. Rencana Aksi Nasional Pangan dan Gizi 2021-
	2024.Badan Perencanaan Pembangunan Nasional.
	2. Tim Penyusun KSKPG. 2019. Konsep Kebijakan Strategis
	KetahananPangan dan Gizi. Badan Ketahanan Pangan Kementerian
	Pertanian. Sekretariat Dewan Ketahanan Pangan.
	3. Indeks Ketahanan Pangan Indonesia 2018. Badan Ketahanan
	Pangan.Kementerian Pertanian.
	4. Global Nutrition Report 2020.
	5. Galanakis, C. 2020. Food Security and Nutrition. Elsevier.

Module designation	Pancasila
Semester (s) in which	1 st semester/1 st year
the module is taught	
Person responsible for	Dr. Hudaidah, M.Pd dan Pancasila Team Teaching
the module	
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Lecture and project
Workload (incl.	5 hours and 40 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study, 120 minutes for structured academic assignment and 120 minutes
study hours)	for self-study per week
Credit points	2 credits (equivalent with 3.2 ECTS)
Required and recom	-
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. explain the Introduction of Pancasila education and Pancasila
learning outcomes	education for the future : the concept, urgency, dynamics and
	challenges
	2. explain the concept, urgency, dynamics and challenges of Pancasila in
	the current history of the Indonesian nation
	3. explain the concept, urgency, dynamics and challenges of Pancasila as
	the basis of the State Foundation
	4. explain the concept, urgency, dynamics and challenges of Pancasila as
	a state ideology
	5. explain the concept, urgency, dynamics and challenges of Pancasila as
	a philosophical system
	6. explain the concept, urgency, dynamics and challenges of Pancasila as
	an ethical system
	7. explain the concept, urgency, dynamics and challenges of Pancasila as
	the basis for the value of science development
Content	1. Introduction to Pancasila Education : the concept and urgency of
Content	Pancasila education, the reason for the need for Pancasila education,
	historical sources, sociological, Pancasila education politics
	2. The dynamics and challenges of Pancasila education and the essence
	and urgency of Pancasila education for the future
	3. Pancasila in the Current History of the Indonesian Nation
	4. Pancasila as the State Foundation
	5. Pancasila as the State Ideology
	6. Pancasila as a Philosophical System
	7. Pancasila as a System of Ethics
	8. Pancasila as the Basic Value of Science Development
	9. The dynamics and challenges of Pancasila as the basis for the value of
	science development

Examination forms	1. Essay Assignments
	2. Essay exams
	3. Multiple choice exams
Reading List	 Aiken, H. D. 2009 <i>Abad Ideologi</i>. Yogyakarta: Penerbit Relief. Ali, As'ad Said. 2009. <i>Negara Pancasila Jalan Kemaslahatan</i>

Module designation	Indonesian (Indonesia Language)
Semester (s) in which	1 st semester/1 st year
the module is taught	
Person responsible for	Dr. Zahra A., M.Pd. dan Indonesia Language Team Teaching
the module	
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Lecture, and project
Workload (incl.	5 hours and 40 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study, 120 minutes for structured academic assignment and 120 minutes
study hours)	for self-study per week
Credit points	2 credits (equivalent with 3.2 ECTS)
Required and recom	-
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. explain the birth of Indonesia
learning outcomes	2. explain the position, function, and legal force of the Indonesian
	language
	3. explain various academic texts; explain the characteristics of academic
	texts
	4. explain the structure of academic texts
	5. use proper spelling and punctuation in academic texts
	6. use effective sentences in academic texts
	7. understanding the essence of paragraphs; understand and use
	paragraph elements; understand and use paragraph types
	8. use quotes in writing and use bibliography in writing
	9. understand the characteristics of an essay
	10. explain the structure of essay writing11. write essays and present the resulting essay writing
Content	1. History of Indonesian Language Development
Content	2. The position, function, and legal force of the Indonesian language
	3. Characteristics of academic texts
	4. Academic text structure
	5. Spelling and punctuation in academic texts
	6. The Nature of Effective Sentences; Characteristics of Effective
	Sentences; Sentence Structure; Types of Sentences
	7. The Nature of Paragraphs; Paragraph Forming Elements; Types of
	Paragraphs; Requirements for a Good Paragraph; Techniques and
	Patterns of Paragraph Development
	8. Systematics of writing quotes
	9. Systematics of writing a bibliography
	10. Characteristics of an essay
	11. Essay writing structure

	12. Essay writing
	13. Presentation of the resulting essay writing
Examination forms	1. Essay Assignments
	2. Essay exams
Reading List	1. Cermat Berbahasa Indonesia untuk Perguruan Tinggi Negeri
	(E. Zaenal Arifin dan S. Amran Tasai, 2018)
	2. Buku Praktis Bahasa Indonesia (Pusat Bahasa Depdiknas, 2016)
	3. PUEBI (Pusat Bahasa, 2018)
	4. KBBI Edisi VI (Pusat Bahasa, 2019)
	5. Ketatabahasaan dan Kesusastraan (H.E Kosasih, 2008)
	6. Inilah Esai (Muhidin M Dahlan, 2016)

Module designation	Mathematics
Semester (s) in which	1 st semester/1 st year
the module is taught	
Person responsible for	Dr Ir Herlina Hanum, MSi and Mathematic Team Teaching
the module	
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Lecture, practical, and project
Workload (incl.	6 hours and 20 minutes of total workload: 100 minutes for Contact Study,
Contact hours, self-	160 minutes for practical, 120 minutes for structured academic
study hours)	assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom-	-
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. Explain the concept of the real number system; Solving operations on
learning outcomes	real numbers.
	2. Distinguish between rational and irrational numbers; Understand and
	apply field Characterisitic
	3. Explain the concept of inequality; Finding the solution to a simple
	inequality, absolute value, square root and square4. Draw quadrilateral coordinates and the given points
	 Draw quadriateral coordinates and the given points Determine the point of intersection of the curve on the coordinate axis;
	Drawing equation graph
	6. Able to determine function value; Drawing function; Completing
	operations on functions
	7. Understand and solve trigonometric function problems
	8. Define Understanding the concept and limit theorem ; Determining the
	continuity of the function
	9. Understand the meaning of derivative; Understand the relationship
	between limits and derivatives ; Determine the derivative of sinus and
	cosinus
	10. Understand the concept of the chain rule; Solving the derivative of the
	composition function ; Write down the chain rule in the Leibniz way
	11. Determine the maximum/minimum critical points of a function
	12. Understand the concept of integrals and understand the rules for
	determining integrals
	13. Understand the concept of replacement method; Determine the integral
	function of the composition
	14. Form a matrix with a certain ordo; Performing operations on matrices
	15. Form a system of linear equations from the given case

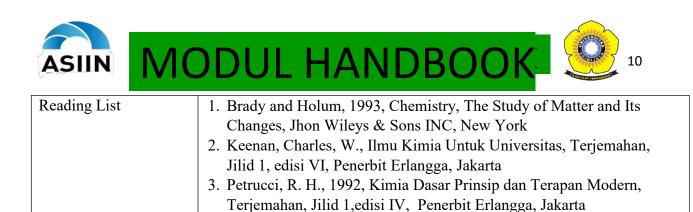

~	
Content	1. Real numeral system; Rational and irrational numbers; Operations on
	real numbers; Characteristif of Field
	2. Inequality; Absolute value; square root; square
	3. Quadrilateral coordinate system, point distance, straight line, slope of
	line
	4. The point of intersection of the curve; Draw an equation graph
	5. Definition of function; Drawing function; Sum operation and multiplication, Composition of functions and trigonometric functions
	 Definition of limit; limit theorem; Continuity of function
	 Definition of derivative through limit; derivate search rules; derivate
	sinus dan cosinus
	 Leibniz Writing chain rule; High-level derivative
	9. Maximum-minimum function; monotony; Concavity
	10. Integral concept; Integral determination rule
	11. Integral of composition function (Replacement method
	12. Area of flat area
	13. Ordo matrix ; Transpose, sumation, multiplication; Determinant ;
	ajoin, dan cofactor Invers matrix
	14. System linear Of equations ; Form matrix from System linear of
	equations ; Solution System linear Of equations ; Notation sigma
Examination forms	
Examination forms	1. Calculating Assignments
	2. Essay exams
Reading List	1. Eddy Supramono, et al, 2000, Matematika Dasar, Universitas Negeri
	Malang – JICA Project.
	2. Taufik Raman R., 2004. Matematika Dasar edisi revisi, Bandung:
	IMSTEP JICA.
	3. Afidah Khairunnisa, 2014, Matematika Dasar Untuk Universitas,

Module designation	Inorganic Chemistry
Semester (s) in which	1 st semester/1 st year
the module is taught	
Person responsible for	Dr. Muharni, M.Si and Inorganic Chemistry Team Teaching
the module	
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Lecture, practical, and project
Workload (incl.	6 hours and 20 minutes of total workload: 100 minutes for Contact Study,
Contact hours, self-	160 minutes for practical, 120 minutes for structured academic
study hours)	assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom-	-
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. understand and explain of material properties, substances and
learning outcomes	Compounds, classification and methods of measurement, the
	principles of the scientific method in the work of science.2. understand and explain of development of atomic theory and modern
	atomic theory
	3. understand and explain of periodic table
	4. understand and explain of the concept of chemical bond formation
	related to molecular geometry
	5. understand and explain of stoichiometry in chemical reactions
Content	1. Material properties, substances and compounds classification and
Content	methods of measurement,
	 The principles of the scientific method in the work of science.
	3. Development of atomic theory and modern atomic theory
	4. The properties of atoms and the basis for the preparation of the periodic
	table, quantum mechanics
	5. The basic concepts of chemical bond formation, ionic and covalent bond
	6. The formation bond related to molecular geometry
	7. The basic concepts of stoichiometry in chemical reactions
	8. To calculate the reaction product when two or more reactions occur
	simultaneously
	9. To determine the reducing agent or oxidizing agent in the oxidation-
	reduction reaction, balance the oxidation-reduction reaction with the
	method of changing the oxidation number
Examination forms	1. Essay exams
	2. Practical works

Module abiactives/intended	After completing the course, students will be able to: 1. Understand and explain the fundamental aspect and the main aspect
objectives/intended learning outcomes	of agricultural technology
learning outcomes	2. Understand and explain the general aspect of land management and
	utilization in agricultural technology
	3. Understand and explain the contribution of tools and machinery
	on Agricultural Technology; influencing factors of Postharvest
	Technology on Agricultural
	4. Understand and describe value and technoeconomic principle of
	Agricultural Technology
	5. Understand ang describe General aspect of Agricultural Product
	Technology; principle element of Product handling and
	processing; fundamental aspect of agricultural product
	preservation; Value and brand image based on packaging
	6. Understand ang describe the fundamental aspect on agroindustrial
	system and management; developing of Agricultual technology on
	Indusrtial 4.0
Content	1. Fundamental aspect of Agricultural Technology (Agricultural
	system and product handling and Technology as drivingfoce in
	Agricultural Development)
	2. The Main aspect of Agricultural Technology
	3. General aspect of Land management and utilization in agricultural
	technology (I)
	4. General aspect of Land management and utilization in agricultural
	technology (II)
	5. Contribution of Tools and Machinery on Agricultural Technology
	6. Element of Postharvest Technology on Agricultural
	7. The value and technoeconomic principle of Agricultural Technology
	8. General aspect of Agricultural Product Technology
	9. Element of Product handling and processing
	10. Fundamental aspect of agricultural product preservation
	10.1 minimitation apper of agriculture product prober (actors

	 11. Value and brand image based on packaging 12. Fundamental aspect on agroindustrial system and management 13. Capita selecta: Agricultual technology on Industrial 4.0 14. Student Focus Group Discussion: Case study report-special topic
Examination forms	 Oral presentation Essay exam Multiple choice exam

Module objectives/	After completing the course, students will be able to:
intended learning	1. explain the principles of techniques and methods of analysis of
outcomes	food/agricultural products
	2. perform various basic and applied chemical analysis techniques on
	agricultural products
	3. select food/agricultural product analysis techniques that appropriate
	to the requirements and characteristics of the material.
	4. conduct research on the combination of operations for processing
	agricultural products, so that they can produce safe and quality
	agricultural products along the agricultural production chain, and
	can provide added value to agricultural products
	5. demonstrate independent, quality, and measureable performance
	6. make appropriate decisions in the context of solving problems in
	their area of expertise, based on the results of analysis of
	information and data
Content	1. Definition, Scope and Aim of Analytical Chemistry
	2. Principal of Laboratory Analytical and Good Laboratory Practise
	(GLP)
	3. Stages of Kuantitative Analytical
	4. Sampling Methode and Preparing of Solution
	5. Titrimetric Analytical
	6. Gravimetric Analytical
	7. Spectrofotometric Analytical

Workload (incl.	6 hours and 20 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study; 160 Minutes for practicum, 120 minutes for structured
study hours)	academic assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom	-
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. describe and calculate the mass and energy balance in the
learning outcomes	processing of agricultural product
	2. describe and calculate principles of heat transfer (Conduction,
	Convection and Radiation) process of agricultural product
	processing
	3. describe and calculate the principle of unit operation and
	Convertion, fluid, size reduction and mixing in the agricultural
	product industry
	4. identify the appropriate operating unit and process equipment in the
	processing of agricultural products
	5. analyze problems with agricultural products technology approach
	so that they are efficient and safe.
Content	1. Introduction: Definition of unit operation; Mass and energy
	conversion; Mass and energy balance; Dimensions and Units
	2. Heat Transfer: Conduction; Convection; Radiation; Overall heat
	transfer; Use of heat transfer
	3. Drying: Drying principle; The relationship between moisture
	content and relative humidity.
	4. Fluid: Static fluid; Dynamic fluid; Type of fluid flow (laminer,
	turbulent); Reynolds number; Pressure drop in pipe
	5. Size Reduction: Crushing and cutting; Emulsification or
	atomization
	6. Mixing: statistical approach and sample analysis in studying the
	mixing process; mixing liquid and particulate matter; mixing rate.
Examination forms	1. Calculating Assignments
	2. Essay exams

mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. describe, explain about the introduction of Islamic Religious
learning outcomes	Education
	2. explain the meaning, the philosophy of divinity in Islam, the
	history of human thought about God, God according to religion
	3. explain the meaning, the philosophy of divinity in Islam, the
	history of human thought about God, God according to religion
	4. describe and explain the implementation of Faith and Taqwa,
	Explaining Problems, challenges and risks in modern life the role
	of Faith and Taqwa in Answering the Challenges of Modern Life
	5. describe, explain about humans according to Islam
	6. describe, explain the concept of Law, HAM, Democracy in Islam
	7. describe, explain the concept of Islamic law, the Contribution of
	Muslims in Indonesia
	8. describe, explain how to apply al-Karimah's morals in daily life
	9. describe, explain concept of science, technology and art in Islam
	10. describe, explain concept of religious harmony and Civil Society
	11. describe, explain concept of Islamic Economics and Islamic
	politics
Content	1. Introduction to Religious education
	2. The Concept of God in Islam
	3. The concept of faith and piety
	4. Implementation of Faith and Taqwa in modern life
	5. Human nature according to Islam
	6. Law, HAM, and Democracy in Islam
	7. Islamic Law, Contribution of Muslims in Indonesia
	8. Moral and Moral Ethics
	9. Science and technology and art in Islam
	10. Inter-religious harmony
	11. Civil Society

	12. Islamic Economics
	13. The concept of Islamic culture
	14. Islamic political concept

Module designation	Civics
Semester (s) in which	2 nd semester/1 st year
the module is taught	
Person responsible for	Dr. LR Retno Susanti, M. Hum dan Civics Team Teaching
the module	
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Lecture, and project
Workload (incl.	5 hours and 40 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study, 120 minutes for structured academic assignment and 120 minutes
study hours)	for self-study per week
Credit points	2 credits (equivalent with 3.2 ECTS)
Required and recom-	-
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. understand the important background, concepts, goals, vision,
learning outcomes	mission and foundation of Civic Education.
	2. describe the history of the formation of the Indonesian nation; able to
	formulate the characteristics of national identity; able to identify the
	factors causing the fading of national identity
	3. describe concepts, urgency, the nature of national integration and be
	able to identify the factors forming national integration
	4. have the ability to explain the meaning of the elements and goals of
	the State ; Definition, constitutional function; Outlining the
	constitution of the State of Indonesia; Explaining the amendment
	UUD 1945.
	5. understand the existing rules of the Indonesian constitution; explain
	the obligations and rights of citizens; analyze the rights and
	obligations of citizens in the life of society, nation and state
	6. explain the history of the growth and development of democratic
	ideas/thoughts; analyze various influential variables in the
	development of democracy; analyze the foundation of democracy in
	Indonesia and describe the history of the development of democracy in Indonesia
	7. explain basic concepts/definitions <i>Rule of Law</i> and analyze problems <i>Rule of law</i> .
	8. explain the history of development HAM and describe various HAM
	as well as institutions HAM.
	9. explain the concept of geopolitics as a national insight
	10.describe the influence of regional and social aspects on existence;
	analyze the problems of the archipelago's insight in facing the times
	11.explain the concept of Indonesian Geostrategy in the form of national
	resilience
L	

	12. explain the background of the importance of national resilience and describe the main ideas and nature of national resilience in Pancasila and UUD 1945.
Content	 Concept, Purpose, Vision, Mission and Background importance of Civics Education National Identity National Integration The State and Constitution of Indonesia The Constitution of Indonesia as a Nation-State Rights and obligations of citizens Indonesian Democracy Law enforcement and HAM Archipelago Insights/ Geopolitics. Gestrategis Indonesia/ National Resilience

Module designation	Organic Chemistry
Semester (s) in which	2 nd semester/1 st year
the module is taught	
Person responsible for	Drs. Dasril Basir, M.Si. and Organic Chemistry team teching
the module	
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Lecture, project and practical
Workload (incl. Contact	6 hours and 20 minutes of total workload: 100 minutes for Contact
hours, self-study hours)	Study; 160 Minutes for practicum, 120 minutes for structured academic
	assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom -	-
mended prerequisite for	
joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. formulate, show and demonstrate the structure and reactions and
learning outcomes	reactivity of organic compounds
	2. explain and apply the relation of chemical reactions to the
	mechanism of damage and shelf life of food/agricultural products
	3. analyze and present alkanes, alkenes, alkynes, alcohols, ethers,
	aldehydes, ketones, carboxylic acids, esters, aromatic compounds,
	organic halogen compounds, stereochemistry, polymers. Reactions in
	organic molecules
Content	1. Introduction / Introduction to Organic Chemistry
	2. Classification of organic compounds and nomenclature
	3. Hydrocarbons: alkanes, alkenes, alkynes
	4. Aromatic compounds
	5. Alkyl halides
	6. Alcohol and ether
	7. Aldehydes and ketones
	8. Carboxylic acids and their derivatives (acid halides and esters;
	anhydrides, amides and nitriles)
	9. Amina
	10. Carbohydrates
	11. Amino acids and proteins
	12. Lipids
Examination forms	1. Essay exams
	2. Multiple choice exams
	3. Practical works

objectives/intended	1. explain the general concept of statistics and identify the data scale of		
learning outcomes	the variables		
	2. explain the measurement scale, select, collect, calculate and process		
	research data		
	 Practicing data presentation in a textular, tabular, and graphical way arrange random data into grouped data (frequency distribution): 		
	Definition of Frequency distribution. Frequency distribution parts;		
	Frequency distribution arrangement; Histograms, frequency polygons,		
	and curves; Type of frequency distribution (student t distribution,		
	chisquare)		
	5. calculate further data that can represent the entire value in the data:		
	Definition of central value measures, Types of center value measures,		
	Calculation of Mean, Median and Mode		
	6. understand the measure of variation or measure of deviation:		
	Descriptive Statistical Measurement, Middle Tendency, Distribution,		
	Position measurement		
	7. calculated and describe the test of Linear regression, correlation and regression analysis and interpret the test results.		
	8. Students are able to perform statistical tests from a sample data from		
	the population and make decisions based on statistical values		
Content			
Content	 Introduction to Statistical Theory; Data and Variables Measurement Scale; Data Collection and Processing 		
	3. Data Presentation		
	4. Frequency Distribution		
	5. Centering Size		
	6. Size Variation or Dispersion		
	7. Correlation and regression analysis		
Examination forms	1. Calculating assignments		
	2. Essay exams		
	3. Multiple choice exams

Semester (s) in which	2 nd semester/1 st year		
the module is taught			
Person responsible for	1. Prof. Ir. Filli Pratama, M.Sc., (Hons), Ph.D.		
the module	 Prof. Dr. Ir. Tamrin Latief, M.Si. 		
Language	Indonesian		
Relation to curriculum	Compulsory Course		
Teaching methods	Lecture, project and respons		
Workload (incl.	6 hours and 20 minutes of total workload: 100 minutes for Contact		
Contact hours, self-	Study; 160 Minutes for practicum, 120 minutes for structured academic		
study hours)	assignment and 120 minutes for self-study per week		
Credit points	3 credits (equivalent with 4.8 ECTS)		
Required and recom			
mended prerequisite	Mathematics		
for joining the module			
Module	After completing the course, students will be able to:		
objectives/intended	1. understand information of calculus course material and objectives of		
learning outcomes	learning these calculus course material especially in agricultural		
	product technology field of study		
	2. understand the calculus material of functions, logarithmic functions,		
	implicit functions, parametric equations and trigonometric functions		
	3. understand the calculus material of partial differential, small		
	increment, change rate, variable replacement		
	4. understand the calculus material of standard integrals, functions of		
	linear functions and special form integrals.5. calculate and apply calculations under and between the curve		
	6. calculate and apply calculations volume of rotary objects for the		
	calculation of the volume of agricultural products.		
Cantant			
Content	1. Introduction (definition, scope, course contract), standard differential coefficients, differential multiplication and division		
	2. Functions of functions, logarithmic functions, implicit functions and		
	parametric equations		
	3. Trigonometric functions		
	4. Small incremental partial differential, rate of change, variable		
	replacement		
	5. Standard integrals, functions of linear functions and special integrals		
	6. Division integral, integral with partial fractions		
	7. Area under and between curves with integration		
	8. Application of area under and between curves with integration		
	9. Volume of a solid revolution by integration		
Examination forms	1. Calculating assignments		
	2. Essay exams		
	3. Multiple choice exams		
Reading List	1. Herman, E.D., Strang, G. 2018. Calculus. Volume 1. Rice University.

Workload (incl. Contact	6 hours and 20 minutes of total workload: 100 minutes for Contact		
hours, self-study hours)	Study; 160 Minutes for practicum, 120 minutes for structured		
Cradit nainta	academic assignment and 120 minutes for self-study per week		
Credit points	3 credits (equivalent with 4.8 ECTS)		
Required and recom	Inorganic Chemistry; Organic Chemistry		
mended prerequisite for joining the module			
Module	After completing the courses, students will be able to:		
objectives/intended	1. understand how biological molecules give rise to the processes that		
learning outcomes	occur between living cells and between cells		
	2. explain structure and function of cells		
	3. explain chemistry of water, bases, acids and buffers		
	4. explain classification, structure, and function of carbohydrate,		
	protein, lipid, nucleic acid and enzyme		
Content	1. Introduction: The scope of Biochemistry, as well as its relation to		
	other fields of science within the scope of food technology		
	2. Biochemistry and Life: Biochemistry and life theory, energetic;		
	Energy and food; Life cycle		
	3. Cell: Cell structure; Animal cells and plant cells; Organelles and		
	their biochemical functions; Tissues and organs		
	4. Body fluids: Intracellular fluid; Extracellular fluid; Body's acid		
	base balance; Electrolyte; Body fluids and biochemical reactions		
	5. Carbohydrate: Definition of carbohydrates; Classification of		
	carbohydrates by monomer; Monosaccharides and their names;		
	Classification of aldose and ketose; Structure of D, L, $/\beta$; Reducing		
	and non reducing sugar; Glycosidic bond; Disaccharides; Polysaccharides		
	6. Lipids: Definition of lipid; The benefits of lipids in food and the		
	body; Naming of fatty acids; Saturated and unsaturated fat;		
	Triglycerides; Phospholipids; Sphingolipids; Glycolipid; Lipids and		
	cell membranes; Lipids without fatty acids		
	7. Protein: Definition of protein; Functions of protein in the body;		
	Basic structure of amino acids; Classification of amino acids based		
	on the R group (polar and nonpolar, aromatic, charged amino		
	acids); Peptide bond; Protein structure; Protein side chain bonds		
	8. Nucleic acid: Definition; DNA as genetic material; Nitrogenous		
	bases, nucleotides and nucleosides; Genetic elements; DNA		
	Structure		

	9. Enzyme: Definition; Enzyme scope; Proteins as enzymes; Enzyme basic structure; Enzyme Classification; Enzyme naming; Enzymes as reaction catalysts; Cofactors and coenzymes; Types of enzymatic reactions
Examination forms	1. Multiple choice exams
	2. Practical works
Reading List	1. Koolman, J. and Roehm, KH. 2005. Color Atlas of
	Biochemistry. 2nd edition. Thieme, Stuttgart, Germany.
	2. Nelson, D.L. and Cox, M.M. 2004. Lehninger Principles of
	Biochemistry. 4th ed. W.H. Freeman and Co.

ASIIN MODUL HANDBOOK 22 32

Module designation	General Microbiology			
Semester (s) in which	3 th semester/2 nd year			
the module is taught				
Person responsible for	1. Dr. rer.nat. Ir. Agus Wijaya, M.Si.			
the module	2. Dr. Ir. Tri Wardani Widowati, M.P.			
	3. Dr. Ir. Parwiyanti, M.P.			
Language	Indonesian			
Relation to curriculum	Compulsory Course			
Teaching methods	Face to face learning, e Learning, Videos			
Workload (incl. Contact	6 hours and 20 minutes of total workload: 100 minutes for Contact			
hours, self-study hours)	Study; 160 Minutes for practicum, 120 minutes for structured			
	academic assignment and 120 minutes for self-study per week			
Credit points	3 credits (equivalent with 4.8 ECTS)			
Required and recom-	-			
mended prerequisite for				
joining the module				
Module	After completing the courses, students will be able to:			
objectives/intended	1. understand and be able to explain the history of microbiology,			
learning outcomes	structural differences between procaryote and eukaryote cells,			
	sporulation, germination and sublethal injury			
	2. understand and be able to explain the morphological, physiological			
	and isolation and identification methods differences among bacteria,			
	yeast and mold			
	3. understand and be able to explain the growth, influencing factors of			
	growth, nutrient transport mechanisms and metabolism in			
	microorganisms			
	4. understand and be able to explain special mechanism in			
	microorganism in order to survive the adverse environmental			
	condition, including antibiotics			
Content	1. History and development of microbiology			
	2. Identification of prokaryote and eukaryote cells			
	3. Bacteria: morphology and physiology			
	4. Isolation, identification and nomenclature of microorganism			
	5. Sporulation, Germination and Sublethal injury			
	6. Yeasts: morphology and physiology			
	7. Molds: morphology and physiology			
	8. Curve of Microbial growth			
	9. Intrinsic and extrinsic factors of microbial growth			
	10. Membrane system and nutrient transport			
	11. Microbial metabolism			
	12. Antibiotics: mode of action and microbial resistance			
	13. Microbial communication			
Examination forms	1. Essays exams			
	2. Multiple choice exams			
	3. Practical works			
Reading List	1. Madigan, M.T., Martinko, J.M. and Parker, J. 2003. Brock

objectives/intended			
learning outcomes	CLO1 Understand definition and function of knowledge		
	CLO2	agricultural products. Understand physical and chemical characteristics of	
		agricultural products (fruits, vegetables, cereals, legumes,	
		tubers, egg, fishery products, meat, milk, plantation	
		products, vegetable oils, and spices) as raw materials in	
		food industry.	
	CLO3	understand physical and chemical changes of agricultural	
		products postharvest.	
	CLO4	understand the mechanism of damage to agricultural	
		products and identify how to control it	
Content	1. Introduction: Definition and function of knowledge of		
	agricultural products		
	2. Physical and chemical characteristics of fruits and vegetables and		
	alternative processed products.		
	3. Changes in the physical and chemical properties of fruits and		
	vegetables during ripening.		
	4. Physical and chemical characteristics of cereals and legumes and		
	their alternative products.		
	5. Physical and chemical characteristics of tubers and alternative		
	processed products.6. Physical, chemical and microorganism properties and their relationship to the quality of milk and dairy products		

	 Egg structure, composition, physicochemistry as a determinant of egg quality and post-harvest and egg preservation and their processed products Characteristics of fishery products and factors determining fish quality. Changes in post-harvest fish and handling of fresh fish Structure, composition and determinants of meat quality as well as physiological and physical changes in meat after slaughter and post-morten processes Definition and classification of plantation products, physical and chemical characteristics of plantation products and some of the main products of plantation products Classification of oil-producing vegetable foods and the physical and chemical characteristics of vegetable oils Physical and chemical characteristics of spices and their use in the food industry

Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Contextual Learning, Cooperative learning, Project-Based Learning
Workload (incl.	5 hours and 40 minutes of total workload: 100 minutes for Synchronous
Contact hours, self-	Study; 120 minutes for structured academic assignment; 120 minutes for
study hours)	self-study per week; 100 minutes for the final project (170 x 3 credits)
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom-	-
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. have good morals, ethics, and personality in completing their duties
learning outcomes	2. work together and have social sensitivity and high concern for society
	and the environment
	3. understand the fields of economics, management, business,
	entrepreneurship, institutions, sociology, counseling, and
	communication as well as agricultural sciences for the development
	of sustainable agribusiness operation systems.
	4. understand operationally the principles of using information
	technology and multimedia that underlie the management of
	agricultural businesses and the agricultural industry for decision
	making and problem-solving in the field of agribusiness by utilizing
	information technology 5 understand and apply the role of communication in the agribusiness
	5. understand and apply the role of communication in the agribusiness system
	6. use media and communication information technology applied in
	every agribusiness sub-system
	7. design effective communication strategies in agribusiness
	development
Content	1. Introduction: Understanding, Basic Principles and Scope of
	Agribusiness Communication
	2. Effective Communication
	3. Agribusiness Communication Methods and Media 4. Principles and Parriers to Communication
	 Principles and Barriers to Communication Communication Applications in Agribusiness Product Marketing
	6. Product Packaging
	7. Market Display and Pricing Strategy
	8. Digital Content in Agribusiness
	9. Digital Content in Agriousness
	7. Digital Content creation practices

	 10. Digital Marketing 11. Digital Marketing Practices on Agricultural Products 12. Negotiating in Agribusiness Communication 13. Business Message Plannin 14. Public Relation in Agribusiness 15. Final Project

Required and recom-	Biochemistry I
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. explain carbohydrate metabolism
learning outcomes	2. explain alternative metabolism
	 explain protein metabolism explain lipid metabolism
	4. explain lipid metabolism
Content	1. Introduction: Metabolism; Catabolism; Anabolism; The link
	between metabolism and food technology
	2. Bioenergetics, Digestion and absorption Energy transfer: ATP;
	Digestive process; Absorption of nutrients in the body
	3. Glycolysis; Enzymes and ATP from glycolysis; Regulation of the
	process of glycolysis; Alcoholic fermentation; ATP from the
	fermentation process
	4. TCA Cycle: The series of processes of the Krebs Cycle; Kreb's
	Cycle ATP Calculation; Kreb's Cycle Enzymes; Regulation in the
	Kreb's Cycle 5 Ovidetive Phagehemylation/Electron Transport: Electron transfer
	5. Oxidative Phosphorylation/Electron Transport: Electron transfer; Oxidative Phosphorylation; ATP production; Regulation of
	respiration
	6. Alternative metabolism/rescue pathway: Glycogenesis;
	Glycogenolysis; Gluconeogenesis; Pentose Phosphate Pathway;
	HMP pathway.
	7. Protein Catabolism: Deamination and transamination; Protein
	catabolism into ATP; Protein catabolism into intermediates; Urea
	cycle.
	8. Protein Anabolism: Formation of peptides; Formation of non-
	essential amino acids; Protein formation; Regulation of protein
	anabolism
	9. Lipid Catabolism: β -oxidation of fatty acids in general; Energy β -
	oxidation; β -oxidation of double-chain and C-odd fatty acids

	10. Lipid Anabolism: Energy of fat anabolism; Biosynthesis in denovo; Elongation; Desaturation; Biosynthesis of special fatty acids

Last Revision	31 July, 2021

Module designation	Hygiene, Sanitation and Food Industry Safety
Semester (s) in which	4 th semester/2 nd year
the module is taught	i sentesten 2 year
Person responsible for	1. Dr. rer.nat. Ir. Agus Wijaya, M.Si.
the module	2. Dr. Ir. Tri Wardani Widowati, M.P.
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Face to face Lecturing, E-Learning, Videos
Workload (incl.	6 hours and 20 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study; 160 Minutes for practicum, 120 minutes for structured academic
study hours)	assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom-	General Microbiology
mended prerequisite	
for joining the module	
Module objectives	After completing the course, students will be able to:
/intended learning outcomes	1. explain sort and sources of contamination and factors that affect contamination
	2. explain hygiene and sanitation of environment, raw materials and
	supporting materials, equipments, finished product and waste.
	3. explain methods of equipments cleaning
	4. explain safety, comfort, hygiene and sanitation of food handlers
	5. explain Hazard Analysis and Critical Control Points
Content	1. Introduction (including definition of hygiene, sanitation and safety in food industry)
	2. Sort and sources of contamination
	3. Factors influencing contamination
	4. Hygiene and sanitation of environment
	5. Hazard Analysis and Critical Control Points
	6. Hygiene and sanitation on raw materials
	7. Hygiene and sanitation on supporting materials
	8. Hygiene and sanitation of equipments
	9. Methods of equipments cleaning
	10. Hygiene and sanitation on food handlers
	11. Safety for food handler
Examination C.	1 Esser Assimuments
Examination forms	1. Essay Assignments
	 Multiple choice exams Practical works
Reading List	1. Forsythe, S.J. and Hayes, P.R. 2010 Food Hygiene, Microbiology
	and HACCP. 3rd ed. Aspen publishers, Inc.
	2. Lelieveld, H.L.M., Mostert, M.A., Holah, J. and White, B. 2003.
	Hygiene in Food Processing. CRC Press.
	3. Marriott, N.G. and Gravani, R.B. 2006. Principles of Food
	Sanitation. 5th edition. Springer.

Workload (incl.	6 hours and 20 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study; 160 Minutes for practicum, 120 minutes for structured academic
study hours)	assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom-	General Microbiology
mended prerequisite	
for joining the module	
Module objectives	After completing the course, students will be able to:
/intended learning	1. describe the principles of preservation and processing of agricultural
outcomes	products by the fermentation process
	2. identify characteristics of microbial spoilage, sequence of events,
	understand significance of microbial numbers and how to prevent
	spoilage.
	3. determine the cause and the types of food borne diseases and responsible pathogenic microbes.
	4. explain principles of microbial growth control in food by physical,
	chemical and novel methods.
Content	1. Introduction: The importance of microorganism in food
	2. The use of beneficial bacteria, yeasts, and molds in food
	3. Food spoilage by bacteria, yeasts and molds
	4. Microbial foodborne diseases
	5. Physical microbial growth control in foods (heat, low temperature,
	low Aw, modified atmosphere, irradiation, novel non thermal tech.)
	6. Chemical microbial control in foods (organic acids, natural dan
	synthetic preservatives)
	7. Microbial control in foods with combination methods (hurdle
	concept)
Examination forms	1. Essay Assignments
	2. Multiple choice exams

Contact hours, self-	Study; 160 Minutes for practicum, 120 minutes for structured academic
study hours)	assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom- mended prerequisite for	Material Science
joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. understand the Philosophy and General Concepts of Principles of
learning outcomes	Agricultural Products Processing
	2. understand the principle of Food Processing and Agricultural
	Products
	3. understand and describe of food processing based on different
	characteristics of raw materials and ingredients (high-carbohydrate,
	high oil/fat, high protein materials)
	4. understand and describe of food processing based on animal
	products; fish and other marine products; honey, eggs, milk and their
	derivative products; fiber, fruit and vegetable product.
	5. describe the principles and techniques of handling and processing
	agricultural products such as semimoist food product, extrusion
	product, effervescent product, encapsulation product
	6. understand and describe of specific food handling and processing
	such as food additive, spices and herbs, emulsion inputs/products.
	7. understand the latest issues in the field of Food Processing and Agricultural Products
Content	1. Philosophy and General Concepts of Principles of Agricultural
	Products Processing
	2. Principle of Food Processing and Agricultural Products
	3. High Carbohydrate Based Processing
	4. High Oil/Fat and High Protein Based Processing
	 5. Processing of Animal Products 6. Processing of Fish and Other Marine Products
	 Processing of Fish and Other Marine Products Processing of Honey, Eggs, Milk and Derivative Products
	8. Processing of Fiber, Fruit and Vegetable products
	9. Handling of Spices and Herbs
	10. Handling of Additive Food in Processing
	11. Handling of Emulsion Inputs/Products

	12. Processing of Semimoist Food Product13. Processing of extrusion Product
	14. Effervescent Product Manufacturing and Encapsulation

Module designation	Physiology and Postharvest Technology
Semester (s) in which	5 th semester/3 th year
the module is taught	
Person responsible for	1. Dr. Ir. Anny Yanuriati, M.Appl.Sc.
the module	2. Dr. Merynda Indriyani Syafutri, S.TP., M.Si.
	3. Friska Syaiful, S.TP., M.Si.
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Face to face Lecturing, E-Learning
Workload (incl.	6 hours and 20 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study; 160 Minutes for practicum, 120 minutes for structured academic
study hours)	assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom-	Biochemistry II
mended prerequisite	
for joining the module Module	After completing the course, students will be able to:
objectives/intended	1. explain the main postharvest physiology of perishable agricultural
learning outcomes	products
	2. explain how to control postharvest physiology of perishable
	agricultural products
	3. explain the relationship between postharvest physiology and the
	mechanism of damage and shelf life of perishable agricultural
	products
	4. explain the principles of techniques and analysis methods of
	postharvest physiology on perishable agricultural products
	5. describe the mechanism of postharvest perishable agricultural
	product damages and identify how to control them
	6. describe the principles and techniques on handling postharvest
	perishable agricultural products, as well as the influence of process parameters on quality, safety and shelf life of postharvest perishable
	agricultural products
	7. determine appropriate postharvest technology for extending the shelf
	life of perishable agricultural products
Cantant	
Content	1. Understanding postharvest physiology of perishable agricultural
	products and the scope of perishable agricultural products postharvest physiology; Evolution and development of perishable
	agricultural products postharvest technology
	2. Characteristics of postharvest perishable agricultural products;
	Post-harvest handling based on plant parts and structure
	3. Cell structure and function, tissue structure and postharvest yield
	composition; Relationship of tissue structure and postharvest
	damage.
	4. Metabolism of postharvest perishable agricultural products
	(respiration: substrate in the process of respiration; factors affecting
	the rate of respiration; respiration rate analysis); ethylene and
	transpiration; Ethylene biosynthesis dan its role on the ripening.

	 Definition of transpiration, transpiration pathways and the factors that influence it. The process of maturation and senescence: respiration, ethylene biosynthesis dan its role on the ripening: chemical and biochemical changes Postharvest technology to slow the maturation and senescence processes of fruits and vegetables by chemical modification Postharvest technology to slow the maturation and senescence processes of fruits and vegetables by cold storage Postharvest technology to slow the maturation and senescence processes of fruits and vegetables by cold storage Postharvest technology to slow the maturation and senescence processes of fruits and vegetables by cold storage Postharvest technology to slow the maturation and senescence processes of fruits and vegetables by modification of the atmosphere and irradiation
	 10. Postharvest technology (low temperature and modified atmosphere) and physiological changes of meat and poultry. 11. Postharvest technology (low temperature and modified atmosphere) physiological changes in fish, shrimp and other types of fish commodities

study hours)	academic assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom-	
mended prerequisite	
for joining the module	
Module	After completing this course, the students will be able to:
objectives/intended	1. understand the concept of quality and standards
learning outcomes	2. understand the concept of quality management and quality management system (ISO, halal, GMP)
	3. understand the importance of standards and regulations in
	quality management
	4. understand the principles of quality measurements (objective
	and subjective measurements on physical, chemical and
	microbiology characteristics of food and agricultural products).
	5. apply the statistical quality control (SQC) and to use standards
	in quality measurement.
	6. analyze current regulations related to food and agricultural
	product quality
	7. evaluate the current regulations in quality management system
	8. apply the concept of quality measurement, standards, and
	quality management system in a particular food or agricultural
	industry taking current regulations into consideration
Content	1. Fundamentals on quality and standards
	2. Standard and standardization
	3. Quality attributes and variables and measurement
	4. Statistical Quality Control
	5. Food Regulations
	6. Quality management system (ISO)
	7. Good Manufacturing Practises (GMP)
	8. Regulations on Halal
	9. Regulations on Food Additives
	10.Quality Standards on Food Additives
Examination forms	1. Project Assignments
	2. Individual essay exam
	3. Presentation on projects

study hours)	academic assignment and 120 minutes for self-study per week	
Credit points	3 credits (equivalent with 4.8 ECTS)	
Required and recom-	Material Science	
mended prerequisite		
for joining the module Module	After completing this course the students will be able to:	
objectives/intended	After completing this course, the students will be able to: 1. Understand the description, purpose and function of preservation	
learning outcomes	technology, the development of preservation technology, the role	
learning outcomes	of preservation technology in the Industrial System and Enhanced	
	Value Added; basic concepts of food preservation and determine	
	the factors causing spoilage and prevention	
	2. Understand and explain Moisture control as the basis of	
	preservation; Damage index and utilization; Room temperature	
	storage management for preservation; preservation mechanism	
	with water activity control (water activity, aw) and can explain the	
	use of humectants in preservation technology under various storage	
	conditions	
	3. Understand and explain the mechanism of preservation of	
	commodities by packaging; Aspects of preservation in traditional	
	and conventional packaging; innovative packaging design	
	4. Understand and explain the types and mechanisms of preservation	
	with chemicals; Application of funigation in conventional	
	preservation; Regulation of the use of chemical preservatives5. Understand and explain the mechanism of preservation with low	
	temperature; Freezing of food/agricultural products and their	
	processing; Low temperature/freeze preservation management	
	6. Understand and explain the mechanism of the preservation system	
	with heat treatment and conventional and non-conventional heating	
	methods; Radiation application basis for preservation; Irradiation	
	based preservation mechanism; Application of irradiation in	
	commodity preservation	
	7. Understand and explain the application of biotechnology and	
	fermentation in conventional and non-conventional preservation	
	technologies	
	8. Understand and explain multiple preservation systems, synergistic	
	effects and hurdle theory.	

F	
	9. Understand and explain the risks of processed materials and their preservation factors; Types and basic methods of preservation of processed materials Application of conventional preservation techniques of processed materials; Modernization of local food into innovative products; Preservation system optimization
	 Introduction: Description of preservation technology, development of preservation technology, Preservation Technology in Industrial Systems and Increased Value Added basic philosophy and basic concepts of preservation Ambient temperature of fresh & postharvest commodities; Preservation with controlled atmosphere and room temperature Low temperature and freeze preservation Packaging System for preservation Drying and Control of Water Activities; Preservation System with Humectant based Chemical Preservative Additives (BTP-Kimia) Energy and Heat Applications in Preservation Biotechnology and fermentation-based preservation Conventional food preservation and modifying local food products into innovative products Non-conventional Preservation of food products Optimization of preservation system

Functional Food and Food Phytochemistry*
5 th semester/3 th year
1. Dr. rer. nat. Ir. Agus Wijaya, M.Si.
2. Sugito, S.TP., M.Si.
Indonesian
Elective Courses
Face to face Lecturing, E-Learning
6 hours and 20 minutes of total workload: 100 minutes for Contact
Study; 160 Minutes for practicum, 120 minutes for structured
academic assignment and 120 minutes for self-study per week
3 credits (equivalent with 4.8 ECTS)
Biochemistry II
After completing the course, students will be able to:
1. understand definition and health benefit of food phytochemistry
2. understand definition and health benefit of functional food
3. explain some examples of food phytochemistry, including mode of
action and application
4. explain some examples of functional food, including mode of action
and application.
5. explain the stability, safety and efficacy as well as regulation for
functional food.
1. Introduction to functional food food phytochemistry
2. Sources, function, classification of food phytochemistry and
health benefit
3. Food phenolic substances: source and health benefit
4. Flavor system for functional food 5. Probiotized definition mode of action and application
5. Probiotics: definition, mode of action and application
6. Prebiotics and dietary fiber: definition, mode of action and application
7. Fatty acids and oil
 8. Vegetable, fruit, spices as bioactive compound sources
 Vegetable, huit, spices as bloactive compound sources Vitamin and mineral fortification on nutraceuticals and functional
foods
10. Antoxidants and its health roles
11. The safety and efficacy of functional foods and ingredients
12. The stability of functional food products
13. Regulations regarding functional foods and their health claims
(USA, European Union and Indonesia)
1. Essay exams
2. Multiple choice exams
3. Practical works

Semester (s) in which	6 th semester/3 th year
the module is taught	
Person responsible for	1. Dr. rer.nat. Ir. Agus Wijaya, M.Si.
the module	2. Prof. Dr. Ir. Basuni Hamzah, M.Sc.
	3. Dr. Ir. Tri Wardani Widowati, M.P.
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Face to face Lecturing, E-Learning
Workload (incl.	6 hours and 20 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study; 160 Minutes for practicum, 120 minutes for structured academic
study hours)	assignment and 120 minutes for self-study per week
Credit points	3 credits (equivalent with 4.8 ECTS)
Required and recom-	General Microbiology
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. describe definition of fermentation, history and its application
learning outcomes	2. describe selection, characterization and strain development of
	microbes for fermentation
	3. describe media and their constraint for fermentation
	4. describe inoculum storage and inoculum development for
	fermentation
	5. describe sterilization process for media and equipment for
	fermentation
	6. explain microbial growth in the types of fermentor design
	 describe design and fermentor instrument explain process control of fermentor (agitation, aeration) and scale up
	9. explain downstream process and purification of fermentation
	products
	10. describe economy of fermentation
Content	1. Introduction (including definition of fermentation, history and its
Content	application)
	2. Microbes for fermentation
	3. Media for fermentation
	4. Strain development
	5. Biofilm
	6. Storage and inoculum preparation
	7. Microbial growth
	8. Sterilization
	9. Design and fermentor instrument
	10. Process control: agitation and aeration
	11. Scale up
	12. Downstream process
	13. Purification of fermentation products
	14. Economy of fermentation
Examination forms	1. Essay exams

	 Multiple choice exams Practical works
Reading List	1. Stanburry, P.F., Whitaker, A. and Hall, S.J. 2012. Principles of Fermentation Technology. 2nd edition. Elsevier.

mended prerequisite for	
joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. internalize the spirit of independence, struggle, and entrepreneurship
learning outcomes	2. think critically, identify the root of the problem and solve it
	comprehensively, and make the right decisions based on analysis of
	information and data
	3. have professional integrity and is committed to ethical values
	4. have an attitude to life-long learning
	5. lead and work in a team, independent and responsible for his work.
	6. cooperate with individuals who have diverse social and cultural
	backgrounds
	7. adapt to the situation at hand and handle various activities simultaneously
	in various condition
	8. provide added value to agricultural products with Indonesian
	characteristics, especially the Southern part of Sumatera with locally-based
	agricultural products and optimal utilization of Indonesia's biological
	diversity through production processes that are safe, standardized,
	efficient, and effective 9. demonstrate independent, quality, and measureable performance
Content	1. Introduction: Mindset Business (understanding of business and traders,
Content	growth mindset, fixed mindset, entrepreneur, mentor, coaching, business
	opportunities in the digital era)
	2. Starting a Business: model business canvas (BMC)
	3. Business Vision and Mission
	4. Leadership and BOM (Business Owner Mentality)
	5. Marketing (reseller and digital marketing)
	6. Branding and Packaging
	7. Team Building: managing HR. Building loyalty
	8. Legality and Cashflow
	9. Guest Lecturer (Professional)
	10. Business incubators and the role of business coaching
	11.PMW Program, PKMI, Indonesian Innovation Startup

	12.Business proposal: proposal discussion and discussion

Module	After completing the course, students will be able to:
objectives/intended	1. understand the concept of system in agriculture
learning outcomes	2. identify the elements of a particular agricultural system, their
	relationships, in a certain system boundary.
	3. analyze the cause-and-effect relationships among the elements of a
	particular agricultural system
	4. construct the input-output diagram based on cause-and-effect
	analysis
	5. apply system analysis techniques to construct simple model for a
	particular agricultural system
Content	1. Introduction to system analysis: system thinking, system
	approach, system concept and system characteristics
	2. The concept of system boundary, system elements and system
	objectives.
	3. System elements and their relationships
	4. Cause-and-Effect analysis and diagram
	5. Input-Output diagram
	6. Feedback mechanism in a system
	7. Flow chart
	8. Decision making with system modeling
	9. Application of a systems approach to agricultural systems

Workload (incl.	5 hours and 40 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study, 120 minutes for structured academic assignment and 120
study hours)	minutes for self-study per week
Credit points	2 credits (equivalent with 3.2 ECTS)
Required and recom-	
mended prerequisite	
for joining the module	
Module	After completing the course, students will be able to:
objectives/intended	1. understand the principles of food fortification
learning outcomes	2. identify how to increase the nutritional value of food through
	various fortification techniques that include fortification of vitamins
	and minerals, fortification of substances other than vitamins and
	minerals (polyphenols, carotenoids, fatty acids and phytosterols)
	3. analyze stability and analysis of fortificants, as well as knowing the
	regulation and safety of fortifications through reviewing the up date
	jurnal
	Juillai
Content	1. Food fortification as a programme of nutrition intervention
	2. Basic principles of food fortification (terminology, types of
	fortification, legal consideration mandatory versus voluntary)
	3. Design of fortification programmes (Case Wheat Flour Fortification)
	(identification of nutrient to be added and the target group for the
	fortified food, selection of foods to reach vulnerable groups, and level
	of nutrients to be added)
	4. Technical aspects of micronutrient addition to foods
	5. Main methods of food fortification
	6. A principles of assay procedures (analyses of fortificant,
	bioavailability assessment)
	7. Implementation of a fortification programme Ex. Flour Fortification
	(Wheat Flour, Maize etc., Rice Fortification (Ultra©Rice etc.),
	Noodles Fortification (Asian Noodle, Rice Noodle, Vermicelli etc.),
	Bread, Cookies etc., Sugar Fortification, Cooking oil fortification,
	Complementary Food Fortification (Juice, Milk etc.), and Salt
	Fortification
Examination forms	1. Assignments
	2. Individual essays exam
	3. Presentation on project

	100

Module designation	Food Enzyme Technology
Semester (s) in which	6 th semester/3 th year
the module is taught	
Person responsible for	1. Dr. Ir. Anny Yanuriati, M.Appl.Sc.
the module	2. Dr. Ir. Tri Wardani Widowati, M.P.
Language	Indonesian
Relation to curriculum	Elective course
Teaching methods	Face to face Lecturing, E-Learning
Workload (incl.	5 hours and 40 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study, 120 minutes for structured academic assignment and 120
study hours)	minutes for self-study per week
Credit points	2 credits (equivalent with 3.2 ECTS)
Required and recom-	
mended prerequisite	
for joining the module Module	After completing the course students will be ship to
	After completing the course, students will be able to:
objectives/intended learning outcomes	 understand the principles of Enzymology and Food Enzyme Technology
learning outcomes	 understand and explain the morphology, structure, nomenclature
	and classification of enzyme
	3. understand and explain the Immobilization Technology of Enzyme
	4. understand and explain the factors in stabilization, Activity,
	catalytic mechanism, kinetics mechanism of enzyme.
	5. understand and explain the Carbohydrase, Proteases, Lipases:
	specific reactions, important/specific enzymes, extraction and
	purification of enzyme
	6. understand and explain the application of enzymes in the various
	of food industries
Content	1. Introduction: Explanation of course CP and how to achieve it for
	one semester; Relationship of Enzymology and Food Enzyme
	Technology
	2. Morphology, Structure and Nomenclature: Enzyme structure,
	Enzyme morphology (Apoenzyme, Holoenzyme, Prosthetic
	Cluster), Catalytic Side and Binding Site, System Nomenclature,
	and Classification of enzymes according to how they work
	3. Immobilized Enzymes (Immobilization Technology): Physical
	Immobilization; Chemical Immobilization
	4. Factors in Stabilization and Activity: Temperature, pH, water
	content, salt concentration; Competitive and non-competitive
	inhibitors 5 Machanism of Enzyma Catalysis and Kinatios: Enzymatic
	5. Mechanism of Enzyme Catalysis and Kinetics: Enzymatic
	reaction, catalytic mechanism, determine Vmax and Km, and enzyme reaction kinetics (to determine Vmax and Km)
	6. Carbohydrase: Enzymes that hydrolyze carbohydrates (specific
	reactions) and enzymes important in the food industry, extraction
	purification and application
	Particution and approaction

	 Proteases: Enzymes that hydrolyze proteins (specific reactions) and important enzymes in the food industry, extraction, purification and applications Lipases: Enzymes that hydrolyze lipids (specific reactions) and important enzymes in the food industry, extraction, purification and application Enzyme applications in the food industry: Bakery industry, cheese production, fermented products, meat tenderization, and fruit and vegetable processing Presentation and discussion
Examination forms	 Oral presentation Essays exams Multiple choice exams

Semester (s) in which	7 th semester/4 th year
the module is taught	
Person responsible	1. Prof. Ir. Filli Pratama, M.Sc., (Hons)., Ph.D.
for the module	2. Dr. Ir. Anny Yanuriati, M.Appl.Sc.
Language	Indonesian
Relation to	Elective course
curriculum	
Teaching methods	Face to face lecturer, project
Workload (incl.	5 hours and 40 minutes of total workload: 100 minutes for Contact
Contact hours, self-	Study, 120 minutes for structured academic assignment and 120 minutes
study hours)	for self-study per week
Credit points	2 credits (equivalent with 3.2 ECTS)
Required and recom-	
mended prerequisite for	
joining the module	
Module	After completing this course, students will be able to:
objectives/intended	1. understand various source potential biopolymers for food application
learning outcomes	2. understand the main chemical, physical and functional characteristics
	of some source potential biopolymers for food aplication
	3. identify the main and current processing technologies used to isolate
	and modify some biopolymers
	4. understand the characteristic and functional changes of modified
	biopolimer
	5. understand current technology development and challenges in
	processing biopolymers for the future
	6. apply on current processing technologies development and challenges
	to create innovative product made of biopolymer.
Content	1. Introduction of science and polymer technology development
	2. Cellulose: potential source, type, structure, physical and chemical
	characteristics, some isolation and modification technics, functional
	properties and its application
	3. Chitin and Chitosan: potential source, type, structure, physical and
	chemical characteristics, some isolation and modification :technics,
	functional properties and its application
	4. Agar:potential source, type, structure, physical and chemical
	characteristics, some isolation and modification technics, functional
	properties and its application
	5. Carragenan: potential source, type, structure, physical and chemical
	characteristics, some isolation and modification technics, functional
	properties and its application
	6. Glucomannan: potential source, type, structure, physical and
	chemical characteristics, some isolation and modification technics,
	functional properties and its application 7 Pectin : potential source, type, structure, physical and chemical
	7. Pectin : potential source, type, structure, physical and chemical characteristics, some isolation and modification technics, functional
	properties and its application
	properties and its application

	105
	 8. Alginate: potential source, type, structure, physical and chemical characteristics, some isolation and modification technics, functionalproperties and its application 9. Gelatin: potential source, type, structure, physical and chemical characteristics, some isolation and modification technics, functionalproperties and its application 10. Gum arabic:potential source, type, structure, physical and chemical and chemical characteristics, some isolation and modification technics, functionalproperties and its application

Module designation	Field Practice
Semester (s) in which	7 th semester/4 th year
the module is taught	
Person responsible for the module	Study Program Lecturer Team
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Project based learning
Workload (incl.	The duration of the Field Practice is equivalent to activities of minimal
Contact hours, self-	30 days (4 weeks) in location
study hours)	
Credit points	3 credits (equivalent with 8.16 ECTS)
Required and recom-	Fulfilled at least 105 credits
mended prerequisite	
for joining the module	
Module	After completing this course, students will have the following
objectives/intended	Attitudes and Values:
learning outcomes	1: upholding human values in carrying out duties based on religion,
	morals, and ethics
	2: work together and have social sensitivity and concern for society and
	the environment
	3: internalize academic values, norms, and ethics
	4: demonstrate a responsible attitude towards work in their field of
	expertise independently
	After completing this course, students will have the following
	Knowledge Ability 1: demonstrate oral and written communication skills related to the
	technical and non-technical aspects
	2: think critically, identify the root of the problem and solve it
	comprehensively, and make the right decisions based on analysis of
	information and data
	3: has professional integrity and is committed to ethical values
	4: have an attitude to life-long learning
	5: lead and work in a team, independent and responsible for his work.
	6: cooperate with individuals who have diverse social and cultural
	backgrounds
	7: searching, tracing, extracting scientific and non-scientific information
	independently and critically
	8: adapt to the situation at hand and handle various activities
	simultaneously in various condition
	After completing this course, students will have the following Specific Capability:
	1: able to conduct research on the combination of operations for
	processing agricultural products, so that they can produce safe and
	quality agricultural products along the agricultural production chain,
	and can provide added value to agricultural products

	107
	2: able to analyze problems with agricultural products technology approach in solving production problems and agricultural products so that they are efficient, safe, and with guaranteed quality
	After completing this course, students will have the following General Capability:
	 1: able to apply logical, critical, systematic, and innovative thinking in the context of the development or implementation of science and technology that pay attention to and applies humanities values in accordance with their field of expertise
	2: able to demonstrate independent, quality, and measureable performance
	3: able to examine the implications of developing or implementing science and technology that pay attention to and applies humanities values according to their expertise based on scientific principles, procedures and ethics in order to produce solutions, ideas, designs or art criticism
	4: able to compile a scientific description of the results of the studies mentioned above in the form of a thesis or final project report, and upload it on the university website
	5: able to maintain and develop a network with supervisors, colleagues. Colleagues both inside and outside the institution
	6: capable of documenting, storing, securing, and retrieving data to ensure validity and prevent plagiarism
Content	Field practice is a course aimed at providing students with a learning experience in order to deepen and/or expand their knowledge in a contextual manner and is carried out by the Agricultural Product Technology Study Program in coordination with the Agricultural Faculty.
Examination forms	 Oral Examination <i>Field Practice</i> Report

Module designation	Final Project
Semester (s) in which	8 th semester/4 th year
the module is taught	
Person responsible for	Study Program Lecturer Team
the module	
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Project based learning
Workload (incl. Contact hours, self- study hours)	The duration of the Final Project is equivalent to activities of 6 mounths.
Credit points	6 credits (equivalent with 9.6 ECTS)
Required and recom- mended prerequisite for joining the module	Fulfilled at least 105 Credit hours
Module	After completing this course, students will have the following Attitudes
objectives/intended	and Values:
learning outcomes	 fear Good Almighty and be able to show a religious attitude upholding human values in carrying out duties based on religion, morals, and ethics
	3: contribute to improving the quality of life in society, nation, state, and the progress of civilization based on Pancasila
	 4: act as citizens who are proud and love their homeland, have nationalism and a sense of responsibility to the country and nation 5: respect the diversity of cultures, views, religions, and beliefs, as well as the opinions or original findings of others
	6: work together and have social sensitivity and concern for society and the environment
	7: obey the law and discipline in social and state life
	8: internalize academic values, norms, and ethics
	9: demonstrate a responsible attitude towards work in their field of expertise independently
	10: internalize the spirit of independence, struggle, and entrepreneurship
	After completing this course, students will have the following Knowledge Ability
	1: mastering the principles of chemistry and analysis of food and agricultural product
	2: mastering the principles of microbiology and food safety3: mastering the principles of engineering and processing of food and agricultural product
	4: mastering the principles of applied sciences of food and agricultural product
	5: mastering the principles of biochemistry of food and nutrition6: having success skill (communication skills, critical thinking/problem solving, professional, longlife learning, interaction, information

After completing this course, students will have the following Specific
Capability:
1: able to design agricultural product production process based on the
application of technology principles and agricultural product
processing in an effective, efficient, and precise manner so as to
produce a well-standardized production process
2: able to design the development of agricultural products that meet the
quality criteria of agricultural products, are safe, nutritious and/or
useful based on the principles of agricultural technology
3: able to conduct research on the combination of operations for
processing agricultural products, so that they can produce safe and
quality agricultural products along the agricultural production chain,
and can provide added value to agricultural products
4: able to analyze problems with agricultural products technology
approach in solving production problems and agricultural products so
that they are efficient, safe, and with guaranteed quality
5: able to design agricultural product packaging in order to protect and
maintain product durability and quality, as well as safe, with
informative labels for consumers in accordance with regulations and
laws related to agricultural products
6: able to provide added value to agricultural products with Indonesian
characteristics, especially the Southern part of Sumatera with locally-
based agricultural products and optimal utilization of Indonesia's
biological diversity through production processes that are safe,
standardized, efficient, and effective
After completing this course, students will have the following General Capability:
Capability:
Capability: 1: able to apply logical, critical, systematic, and innovative thinking in the
Capability:1: able to apply logical, critical, systematic, and innovative thinking in the context of the development or implementation of science and
 Capability: 1: able to apply logical, critical, systematic, and innovative thinking in the context of the development or implementation of science and technology that pay attention to and applies humanities values in
Capability:1: able to apply logical, critical, systematic, and innovative thinking in the context of the development or implementation of science and
