Alternative Astronomical Providence	
Module Designation	Agroclimatology
Code	PAG 20116
Semester (s) in which the module is	3 rd semester/2 nd year
taught	
Person responsible for the module	Dr. Ir. Firdaus Sulaiman, M. Si.
	Dr. Ir. Yakup, M. S.
	Dr. Ir. Zaidan Panji Negara, M. Sc.
	Fitra Gustiar, S. P., M. Si.
Language	Indonesian
Relation to curriculum	Compulsory Course
Teaching methods	Contextual Learning, Cooperative learning and assignment
Workload (incl. Contact hours,	Lectures = 23.33 Hours
self-study hours)	Exam = 3.67 Hours
	Practicum = - Hours
	Structure assignment = 24 Hours
	Self-study = 24 Hours
	Total : 75 hours = 3 ECTS
Credit points	3 credits
Required and recommended	-
prerequisite for joining the module	
Module objectives/intended	1. Capable of understanding, describing and explaining
learning outcomes	the basic definition of agroclimatology.
	2. Capable of understanding, describing and explaining the role of climate for agriculture.
	3. Capable of understanding, describing and explaining
	the description of climate and weather elements
	(atmosphere, radiation, temperature, humidity, air
	pressure, wind, clouds, rain, evapotranspiration) and
	the relationship between agricultural classification,
	rainfall, and climate in Indonesia.
	4. Capable of understanding, describing and explaining
	solar radiation, air temperature, temperature and plant
	growth, air pressure and wind, humidity, hydrological
	cycle, clouds, and rain.
	5. Capable of understanding, describing and explaining
	climate classification, tropical climate and climate in Indonesia
	6. Capable of understanding, describing and explaining
	global warming and climate change.
	7. Capable of understanding, describing and explaining
	the effect of climate on pests and plant diseases.
	8. Capable of understanding, describing and explaining
l	

ASIIN	

A Constanting to the Constanting of the Constanting	
	adaptation to climate change.
	9. Capable of understanding, describing and explaining
	agroclimate suitability for agriculture, climate
	modification.
	10. Capable of understanding, describing and explaining
	measurement of weather and climate elements.
	11. Capable of understanding, describing and explaining
	La-nina and El-nino and their impact on agricultural
	production, Indonesian climate
Content	1. Scope of agroclimatology
Content	2. The role of climate for agriculture
	3. Earth's atmosphere
	4. Solar radiation
	5. Air temperature
	6. Temperature and plant growth
	7. Air Pressure and Wind
	8. Humidity
	9. Hydrological cycle, clouds, and rain.
	10.Climate classification
	11.Tropical climate
	12.Climate in Indonesia

8. Students are able to analyze, The role of supplier
management in SCM, The role of production
management in SCM, The role of logistics
management in SCM.
9. Students are able to analyze Definition of
procurement, The role of procurement in SCM,
Procurement Activities in SCM, Contract,
Procurement Decision (Decision to procure),
Procurement lead times, Appreciation of Domestic
Product, Partnership Contracts (Strategic
Alliances), Total Cost of Ownership (TCO),
Original Equipment Manufacturer (OEM),
Procurement One, Centralized vs decentralized
procurement, Manufacturers vs Traders,
International suppliers vs national suppliers, and
Brand names vs generics.
10. Students are able to evaluate The role of freight
transport and The role of warehouse management
in SCM.
11. Students are able to manage and develop and The
role of distribution management in SCM.
12. Students are able to manage and develop The role
of customer management in SCM, The role of
inventory management in SCM, and The role of
materials management in SCM.
13. Students can apply and utilize to know and
understand Value chain concept, Value chain
potential and constraints.
14. Students are able to integrate concepts and
practices regarding The role of requirements
forecasting management in SCM, The role of
information management in SCM, The role of
quality management in SCM, and The role of
environmental management in SCM.

1.	Learning contract, RPS explanation, Scope of
	Soiland water conservation
2.	Process and Mechanism of Erosion. The process
	of erosion occurs in 3 phases: erosion, transport
	and deposition; Erosion-causing agents: water
	and wind; Rainfall properties that affect erosion;
	Erosion forms; Erosion that can still be allowed
3.	Water cycle; Water equation; Discharge
	measurement and surface runoff
	prediction
4.	Factors Affecting Erosion. Climate factors
	(rainfall): the amount of CH, intensity,
	distribution, Soil factors: structure, organic matter,
	permeability, texture. Topographic factors: the
	length of the slope and the slope of the slope.
	Vegetation factors: plantroots, canopy and litter
5.	
	Calculation of erosion in the experimental plot
6.	Erosion prediction (USLE and RUSLE);
	Erosionmapping (Iso erodent line)
7.	Erosion Measurement in Watershed: Monitoring
,.	oferosion in the field and watershed
8.	Soil Conservation Methods in Erosion Control.
0.	Soil Conservation Methods in Erosion Control:
	Mechanical methods: tillage, terraces, guluds,
	conservation channels, rorak, (making and
	measuring)
9.	
9.	Vegetation methods: cropping according to
	contour, multiple cropping, cropping in STRIP,
	rotation, cover cropping.
10	Problems caused by erosion. In situ damage,
10	Waterbody damage
11	
11	5
10	damage,floods and landslides Floods and Landslides. Causes and control
12	offloods and Landslides. Causes and control
13	. Land capability class as the basis for
	conservation farming
14	Examples of erosion and flood damage in
	South Sumatra and Indonesia

Module designation	Social Economics Research Methodology		
Code	ABI 603317		
Semester (s) in which the module is taught	6 th semester/3 nd year		
Person responsible for the module	Prof. Dr. Ir. Sriati, M.S. Ir. M. Yazid, Ph.D. Dr. Yunita, S.P., M.Si. Dr. Erni Purbiyanti,S.P., M.Si		
Language	Indonesian		
Relation to curriculum	Compulsory Course		
Teaching methods	Contextual Learning, Cooperative learning, Project based Learning		
Workload (incl. Contact hours, self-study hours)	Lectures = 23.33 Hours Exam = 3.67 Hours Practicum = 19.83 Hours Structure assignment = 24 Hours Self-study = 24 Hours Total : 94.83 hours = 3.79 ECTS		
Credit points	3 credits		
Required and recommended prerequisite for joining the module			
Module objectives/intended learning outcomes	 Students are able to understand and explain the definition of Social Research Methods. Students are able to understand and re-explain the Qualitative and Quantitative Research Paradigms. Students are able to understand and re-explain the process and stages of research Students are able to write/formulate examples of topics, titles, and formulations of research problems in the field of agribusiness. Students are able to explain dan formulate the theoretical / concept framework used to solve / answer the formulation of their research problems. Students are able to apply /formulate research hypotheses to match the formulation of the problem. Students are able to provide examples, explaining the types of research variables in the field of agribusiness, complete with operational definitions. Students are able to choose and apply research instruments Students are able to understand, build and design
